

About Precision Rx-Dx Inc:

Precision Rx-Dx Inc is an international consultancy, based in Canada, specializing in Precision Medicine. The company was formed to consult with and support companies on the launch of their companion diagnostics (CDx) and biomarkers. We support our clients in refining global strategies to build local market and organizational readiness, to ensure a robust launch and accelerated adoption of both the targeted therapeutic and the associated companion diagnostic (predictive biomarker).

Our clients are developing drug candidates which are targeted therapies that require the concurrent implementation of predictive biomarkers in order to identify patients in a timely manner so they can benefit from these therapies.

We are posting the position of Diagnostic Liaison (DL), which will be a part-time contract role. Diagnostic Liaisons will work in coordination with the Precision Rx-Dx management team to develop and implement tactical plans for our clients. The Diagnostic Liaison (DL) will require a good understanding of clinical operational issues on the testing pathway as well as experience with current technologies, so that they can assist in building the optimal awareness, education and preparation for implementing the required predictive biomarker tests.

Please contact us at info@precisionrxdx.com if you'd like to learn more before potentially submitting your resume.

Position Title: Diagnostic Liaison (DL)
Part Time/Project Based

Regions:

- QC and ATL (QC Focus)
 - ON
 - West (BC/AB, SK, MB) *BC/AB (Focus)*
- Based in territory of focus
Remote/virtual; limited travel

Reporting to: Principal or Director, Precision Rx-Dx

Overall Responsibilities of the DL:

- Work with the Precision Rx-Dx team to execute on objectives and tactical plans agreed on with Clients
- Identify and develop relationships with key Stakeholders; Scientific experts, Laboratory decision makers, Pathologists, Molecular Pathologists, Geneticists and Genetic counsellors and other Health Care Professionals (HCPs).
- Support our Clients' objectives to build awareness, education, preparedness for implementation of new biomarker or diagnostic tests.
- Provide support to Targeted Stakeholders for the specific development of testing solutions.

Key activities:

- Share and present educational information on testing solutions
- Deliver technical and other presentations to educate on the need for diagnostic quality assurance (QA) programs.

- Identify and record information on barriers and potential opportunities related to the implementation of testing solutions.
- As the work is team based, work with other Precision team members and with our Clients' cross-functional teams

Education/Experience required:

- Undergraduate degree with Medical Laboratory Diploma or Advanced degree in life sciences, medical, pharmacy or business
- Good understanding of clinical operational issues related to testing pathways
- Strong communication, relationship building and presentation skills
- Project management experience and strong teamwork and collaboration skills
- Flexibility to travel occasionally

Preferred qualifications:

- Experience in pharmaceutical and/or diagnostics and the clinical testing market; oncology experience an asset.
- Experience interacting with a broad base of Health Care Professionals (HCPs)
- Licenced with College of Medical Laboratory Technologists
- Knowledge of the laboratory regulatory environment
- Bilingual (French/English) in QC territory: Note that technical and scientific materials will be provided in english

Interviews: Only candidates who meet the minimum requirements as outlined above, will be considered.

Interested candidates should submit a resume and letter of interest via email to:

info@precisionrxdx.com

The successful candidate will be required to agree to an Associate Agreement.
